

## Šimon Láznicka

I'm first-year bachelor's physics student from the student residence Na Větrníku. I would like to be actively involved in events at faculty, for example through SKAS.

**Freshman problems** All members of SKAS are studying at least in second year bachelor's. And none of bachelors is a physics student. I would like to help resolve problems of younger and freshman students, since I still remember them quite well.

**Training of teaching competencies** New teachers, unlike the older ones, have to take part in training of teaching competencies, even though it might be important for the older ones especially. It's definitely a complicated topic which SKAS has further investigated already. I would like to take part and see what can be done.

**Kuchyňka** Bus station Kuchyňka in Troja was moved for a quite a long time further away from faculty, even though large part of its users is made up of Matfyz students. It definitely wouldn't hurt trying to move it back where it belongs and therefore ease arrivals for both, students who are coming late to class and everyone who needs to be in campus Troja.

**First protocol/paper in a week!** This is specifically focuses on physics students, especially the younger ones. I think that the first paper you turn in Practical Courses should be graded sooner than in two weeks. But sometimes it's even later, sadly.

**The little things** There are many small, and apparently easy to solve problems. I would like to make even the little things better, maybe your suggestions, which could make life better for many students.

**Do not hesitate to contact me** mail: [simon.laznicka@protonmail.com](mailto:simon.laznicka@protonmail.com)
