

Martin Šáda

Candidate for MFF senator

I am a first-year student of General Mathematics at MFF. In my free time, I work as a programming lecturer for children and I also tutor high school subjects.

As a senator, I would like to defend the interests of students, listen to their problems and present any student initiatives at meetings of the academic senate. Furthermore, I would emphasize that even the first-year students need to be heard, as nowadays they are often overlooked.

Main points of my election program:

- Listening to both older students and freshmen and solving their problems
- Reduction of academic inbreeding
- Making the social aspect of studies more attractive
- Reform of the adaptation course at Albeř
- Discussion of the possibility of a sleep-over at Impakt

Why me:

I am a goal-getter, I like to communicate with people and I am not afraid to stand up for my opinion. I do what I think is right and I have the will to see it through. However, I do not suffer from excessive self-confidence, I am capable of admitting a mistake and learning from it. I listen patiently even to people who disagree with me and I am always open to debate.

If you want to know more about me and my program, I will be very happy if you follow me on my instagram created for the purpose of candidacy:

https://www.instagram.com/mss_mff/

Here, in the near future, I will explain the individual points of my election program in more detail, answer questions and respond to any current events.

If you have any questions, comments or criticism in regards to me, do not hesitate to contact me either through my Instagram or via email:
